Google DNS Down

2020-10-03 - John Peck - Comments (0) - General

We are having problems with the routes that BT connect to google DNS at present, this may effect anyone that has the 8.8.8.8 google DNS in there device, router or radio. If you know how to manual set up your DNS change them to Cloudflare 1.1.1.1. This is network feed issue and may resolve itself shortly, Gigabair are restricted on what it can do at present.
