Interference at ST Georges Tower (4-6 Weeks)

2022-06-15 - John Peck - Comments (0) - General

St Georges Tower an iconic building in Leicester is having one of the largest pieces of street works in with world being painted on it. As result the maintenance crane is being used which on this occasion will travel in front of customer radios, this will result in poor service or complete outages. We are working with artist and building owner to reduce the amount of interruptions and have moved many customer dishes to reduce the impact. If customers are experiencing problems please put a tick in for investigation.
